**Objective:** (using keywords)

The project 'Bedrijfsstikstofbalans' or 'company nitrogen balance' is an EIP or European Innovation Partnership project. In an EIP-project an operational group (OG) is crucial. The members of the OG are farmers, researchers and - if needed - some extra stakeholders. They work together to find a solution for a problem reported by the farmers themselves. In this project we look at the feasibility of the development of a nitrogen balance on a dairy farm and the possibility to use it as an official measurement to reduce ammonia emissions.
